Preprocessing Needed

1. **Lowercasing**
   - Convert all text to lowercase : "Heyyy" → "heyyy"
2. **Remove Emojis**
   - Emojis are not useful for many ML models : 👉 😜, 😂 removed
3. **Remove Repeated Characters**
   - Normalize repeated letters : "soooo" → "so"
4. **Expand Slang / Abbreviations**

- Convert to proper words : "plz" → "please", "ur" → "your"

5. **Spelling Correction**
    - Fix typos : "beleive" → "believe"
6. **Remove Special Characters**
    - Remove symbols like !, ?, etc.
